CATO Research Chemicals Inc.

CATO reference standards

Established in Eugene, Oregon, the United States, Cato Research Chemicals Inc. (Hereafter referred to as CATO), which is specialized in manufacturing reference standards.

CATO, which currently provides laboratories in more than 80 countries and regions all over the world with tens of thousands of reference standards, mainly including chemical reference substances of drug impurities, industrial reference standards, reference standards for intermediates and plant extract etc. In the near future CATO will offer intermediates and APIs with small package and custom synthesis services.

CATO can provide many kinds of the reference standards, such as neat standards, solutions of individual compounds, mixtures of compounds.

For ease of using and researching, CATO separated catalogue into industry, textile, leather toys, veterinary drugs, food(including pesticide) and environment, according to current hot issues. Each catalogue contains the relevant solutions of individual compounds and mixtures of compounds.

Hope our catalogue are helpful for looking for information of standards, the catalogue is continuously updated. If you can't found reference standards, you could contact local distributor, or send an email to info@cato-chem.com, or visit to our website: <http://www.cato-chem.com>.

About product number

CATO reference standards are separated into three categories.

The first category is neat standards, in product number of it, the first letters is "C", and the product number is consists of four English letters plus six digits, such as: COT111601.

The second category is the solutions of individual compounds, in product number of it, the first letters is "L", the product number is consists of four English letters plus six digits plus "-" plus two English letters, the last two letters indicate corresponding solvent, such as: LPAE111736-HE.

The third category is the mixtures of compounds, in product number of it, the first letters is "M", the product number is consists of four English letters plus six digits plus "-" plus two English letters, the last two letters indicate corresponding solvent, such as: MPAE111723-HE.

The first four letters in product number, indicate the product classification, details as follows:

CWLT	Textiles, leather, toys	CCAD	Veterinary drugs	CCPE	atural
CCFD	Food	CCPD	Pesticide residue	CCHM	Others
CCEM&CCET	Environment				

The following five kinds product are special classification, according to the role of them, incorporated into the above 8 categories:

CPAE	Phthalates	CAZO	Azo compound	COTI	Organotins
CFRT	Organophosphate flame retardants			CPAH	PAHs

The last two letters in product number of solution standards indicates the solvent, specifically as follows:

AL	Acetonitrile	HE	n-Hexane
BE	Benzene	IO	Iso-Octane
CY	Cyclohexane	MB	Methyl-tert. Butyl ether
DI	Dichloromethane	ME	Methanol
EA	Ethylacetate	TO	Toluene
EL	Ethanol	WA	Water

For example:

CCFD200174: reference standards, CCFD indicates it is food reference material.

LPAE111743-HE: solution standards, the "L" indicates it is the solutions of individual compounds, HE indicate solvent is n-Hexane.

MAZO111426-ME: solution standards, the "M" indicates it is the mixtures of compounds, ME indicate solvent is methanol.

Quality and certification

Quality

All materials are traceable to The International System of Units via the use of certified weights and certified volumetric flasks. All products are produced under the quality system meeting both ISO 9001 and ISO/IEC 17025 standards and in accordance with the guidance of ISO Guide34.

Certification

CATO solution standards are designed for calibration or recalibration of chromatographic or other analytical systems used for quantitative or qualitative purposes. The products may also be used as reference standards for studies and to validate analytical procedures.

All raw materials used to prepare the multicomponent mixtures are of the highest purity. After our production process, each material is checked using several of the following methods, if applicable: UV, IR spectroscopy, elemental analysis, chromatographic properties and physical properties and Karl Fischer titration for detection of water content.

Analytical authentication

CATO Certificates of Analysis provide a full description of the material to which they relate and summarise the analysis undertaken during the characterisation process. Current Certificates of Analysis for individual lots /batches for products in the range are available on our website, <http://www.cato-chem.com> on the relevant product pages. If you are unable to find the product that you require please contact one of our local sales offices.

The COA (reference standards / solution standards)

Certificate of Analysis		
Catalogue Number:	CCPD100160	Lot No: 2E-11-24
Product Name:	Captan	
CAS Number:	133-06-2	
Molecular Formula:	C ₈ H ₈ Cl ₂ N ₂ O ₂ S	Molecular Weight: 300.59
Storage:	+5°C	
Chemical Structure:		
Test Description	Specifications	Results
Appearance:	Light Yellow Powder	Conforms
Identification:	MS	Conforms
Purity:	HPLC	99.1%
<small>This analysis method has been verified using an approach consistent with ISO 17025:2005 and registered to ISO 9001:2008. The uncertainty calculated for this product is ±2.0%. The value is the expanded uncertainty and represent an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level. If you lose the certificate, you could request a soft copy by sending us an e-mail with the lot number, or directly download it from our website at www.cato-chem.com/download. If you need the MSDS, please feel free to contact us by sending an e-mail with the lot number or CAS number, or directly download it from our website at www.cato-chem.com/download.</small>

The End

CATO Research Chemicals Inc.

Iron box and three layers of sponges are employed in the package of CATO standards so as to avoid the damage caused by negligence during transportation. Moreover, the labels are made from PP synthesized paper that can guard themselves from tearing and damages. Anti-counterfeit labels are also applied surrounding the box so as to make sure that every standard is brand new to the users.
